

KS2 Growing plants and life cycles Package

Our woodland habitat provides an excellent range of animal and plant and life, perfect for studying life cycles, growing conditions, tree growth, habitats and food chains, seeds, and ecology in general.

The leader will take the group on a hands-on exploration of the woodland to investigate the woodland, its soil, water courses, growing plants and woodland animals.

The walk will be tailored to your exact requirements, whether it's trees, seeds and dispersal, plant succession, animal identification and signs of animals, food chains, leaf, water and soil cycles or woodland flora, and will use suitable terms and language for the age and ability of the children. The children will gather an understanding of how the woodland works as a whole.

You may use collecting bags to take finds back to school.
